AllOfTech

# How to Choose a Tech Agency

A free briefing you can take into the next vendor call.

Hiring the wrong studio burns the brief, the budget, and a quarter. Lock the outcome before you talk to anyone. Then ask for proof, process, and post-launch support. Use this as a scorecard on the next call - including ours.

## 1. Define the outcome first

Write the business result, budget band, timeline, and what done looks like. A vague brief invites a vague pitch. A clear brief lets you compare agencies on fit, not on slides.

## 2. Ask for proof that matches the work

Review the portfolio and case studies. Look for projects like yours and results you can check. A reputable agency will show measurable outcomes, not only screenshots.

## 3. Check technical fit

Confirm they build what you actually need: AI/ML, web, mobile, UX/UI, branding, animation. Ask who does the work. One team end to end is different from a pass-through of freelancers.

## 4. Watch how they communicate

The first conversations are the process. Ask about project management, reporting, feedback, and who owns decisions. Slow, fuzzy answers now stay slow after kickoff.

## 5. Price for value, not the lowest quote

The cheapest bid often rewrites the scope later. Compare what is included, what is assumed, and what support looks like after launch.

## 6. Confirm support after launch

Ask who maintains the system, how issues are handled, and what the first 90 days look like. Delivery is not the finish line.

## How AllOfTech works against this list

We start with business clarity, not code. One team covers AI/ML, web, mobile, UX/UI, branding, and animation. 27 projects delivered, 95% on-time, 4.9 from published reviews. Case studies are on alloftech.site. Book a call when you want to test the fit.

Replace this file each month with the current briefing. Keep the filename current.pdf.
